

Book Review

The short Text book of Pediatrics

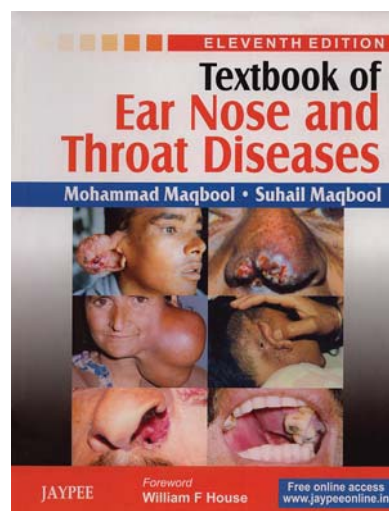

**Edited by: Suraj Gupte
Eleventh Edition, 2009**

**Publisher: Jaypee Brothers Medical Publishers
(P) Ltd. New Delhi, India**

Price: Rs. 1440/- NC

This single volume of book is large enough to cover the expanse of undergraduate syllabus, yet small enough to contain within the grasp of an average medical student. The formatting of the text with capital lettered and coloured print headings simplifies quick locating of any topic of interest of the reader. All tables in coloured boxes and colored numbering of 'parts' near the margin of every page further help the busy student. This book has 818 pages and consists of 9 parts, appendices and a detailed index. It has been updated keeping in view the recommendations of the Medical Council of India, regarding MBBS syllabus. As a short textbook, it almost fulfils the requirement of Kathmandu University MBBS curriculum and is a useful helping book. Written in a very simple language and illustrated with numerous tables and coloured photos and diagrams makes the reading a real pleasure. Quality print on good papers and hard cover binding enhanced the value of the book. In conclusion, this book is strongly recommended for all the medical students, interns and paediatric residents.

Textbook of Ear, Nose and Throat Diseases

11th Edition, 2007

Author: Mohammad Maqbool, Suhail Maqbool

Published by Jaypee

Price: Rs .632/- (Nc) Rs.395/- (Ic)

The eleventh edition of Textbook of Ear, Nose and Throat Diseases presents a comprehensive overview of many of the Ear, Nose and Throat diseases. The use of colour photographs, systematic contents, simple and easy language, and a comfortable letter size facilitate understanding and simplify the subject matters. It is therefore of interest to medical students, interns and house officers providing them with better understanding of clinical features, diagnoses and treatment of ENT-specific problems.

This book is also useful as a reference material for general practitioners and practicing ENT doctors. It is hoped that this compact volume will contribute to the knowledge of a wider medical community, so that ENT- specific problems can be rapidly and accurately identified and treated by general practitioners or appropriately referred to ENT- specialist.

Dr. Sangita Shrestha
Department of ENT and Head & Neck Surgery
